

IN THE CLAIMS

This listing of claims replaces are prior listings:

1. (previously presented) A method in a data processing system, comprising the steps of:
recording a media stream of an interactive presentation having interactive elements that a user interacts with during playback of the interactive presentation;
receiving a request during the recording to add notes to the media stream at a particular time;
adding the notes to the media stream by synchronizing the notes to the media stream at the requested particular time;
playing the recorded media stream; and,
displaying the notes during the playing of the recorded media stream at the particular time.

2. (original) The method of claim 1, wherein the step of adding notes furthers comprises:
annotating an image with text.

3. (original) The method of claim 1, further comprising:
editing the notes.

4. (original) The method of claim 1, further comprising:
importing the notes to be added to the media stream.

5. (original) The method of claim 1, further comprising:
printing the added notes.

6. (original) The method of claim 1, further comprising:
entering the notes using voice recognition.

7. (previously presented) A data processing system comprising:
a memory comprising a program that records a media stream of an interactive presentation having interactive elements that a user interacts with during playback of the interactive presentation, receives a request during the recording to add notes to the media stream

at a particular time, adds the notes to the media stream by synchronizing the notes to the media stream at the requested particular time, plays the recorded media stream, and displays the notes during the playing of the recorded media stream at the particular time; and
a processor for running the program.

8. (original) The data processing system of claim 7, wherein the memory further comprises a graphical user interface for the adding and displaying of the notes.

9. (original) The data processing system of claim 7, wherein the program further annotates an image with text.

10. (original) The data processing system of claim 7, wherein the program further edits the notes.

11. (previously presented) A computer-readable medium containing instructions for controlling a data processing system to perform a method comprising the steps of:
recording a media stream of an interactive presentation having interactive elements that a user is able to interact with during playback of the interactive presentation;
receiving a request during the recording to add notes to the media stream at a particular time;
adding the notes to the media stream by synchronizing the notes to the media stream at the requested particular time;
playing the recorded media stream; and
displaying the notes during the playing of the recorded media stream at the particular time.

12. (original) The computer-readable medium of claim 11, wherein the method further comprises annotating an image with text.

13. (original) The computer-readable medium of claim 11, wherein the method further comprises:
editing the notes.

14. (original) The computer-readable medium of claim 11, wherein the method further comprises:

importing the notes to be added to the media stream.

15. (original) The computer-readable medium of claim 11, wherein the method further comprises:

printing the added notes.

16. (original) The computer-readable medium of claim 11, wherein the method further comprises:

entering the notes using voice recognition.

17. (previously presented) A data processing system comprising:

means for recording a media stream of an interactive presentation having interactive elements that a user is able to interact with during playback of the interactive presentation;

means for receiving a request during the recording to add notes to the media stream at a particular time;

means for adding the notes to the media stream by synchronizing the notes to the media stream at the requested particular time;

means for playing the recorded media stream; and

means for displaying the notes during the playing of the recorded media stream at the particular time.

18. (previously presented) A method in a data processing system, comprising the steps of:

playing a media stream having one or more notes synchronized to the media stream at a particular time, the media stream being part of an interactive presentation having interactive elements that a user is able to interact with during playback of the interactive presentation;

receiving a request to edit one of the notes in the media stream; and

editing the requested one of the notes while retaining the synchronization of the notes at the particular time in the media stream.

19. (original) The method of claim 18, further comprising the steps of:
playing the media stream; and
displaying the edited notes during the playing of the media stream at the particular time
they were synchronized to the media stream.

20. (original) The method of claim 18, further comprising the steps of:
adding notes to the media stream during recording via a graphical user interface, and
wherein the step of editing the requested notes further comprises:
editing the requested notes via the graphical user interface.

21. (previously presented) A data processing system comprising:
a memory comprising a program that plays a media stream having one or more notes
synchronized to the media stream at a particular time, the media stream being part of an
interactive presentation having interactive elements that a user is able to interact with during
playback of the interactive presentation, receives a request to edit one of the notes in the media
stream, and edits the requested one of the notes while retaining the synchronization of the notes
at the particular time in the media stream; and
a processor for running the program.

22. (original) The data processing system of claim 21, wherein the program further
plays the media stream, and displays the edited notes during the playing of the media stream at
the particular time they were synchronized to the media stream.

23. (original) The data processing system of claim 21, wherein the program further adds
notes to the media stream during recording via a graphical user interface, and wherein the step of
editing the requested notes further comprises editing the requested notes via the graphical user
interface.

24. (previously presented) A computer-readable medium containing instructions for
controlling a data processing system to perform a method comprising the steps of:

playing a media stream having one or more notes synchronized to the media stream at a particular time, the media stream being part of an interactive presentation having interactive elements that a user is able to interact with during playback of the interactive presentation; receiving a request to edit one of the notes in the media stream; and editing the requested one of the notes while retaining the synchronization of the notes at the particular time in the media stream.

25. (original) The computer-readable medium of claim 24, wherein the method further comprises the steps of:

playing the media stream; and displaying the edited notes during the playing of the media stream at the particular time they were synchronized to the media stream.

26. (original) The computer-readable medium of claim 24, wherein the method further comprises the steps of:

adding notes to the media stream during recording via a graphical user interface, and wherein the step of editing the requested notes further comprises:
editing the requested notes via the graphical user interface.
